

The AirCharge is a wireless charging solution that provides power to any Qi compatible smartphone or device. Below is a complete list of products designed with Qi wireless charging technology built-into the device. For devices not yet compatible with the Qi technology, ECA offers a Wireless Charging Receiver with hard connections allowing the AirCharge unit to adapt to most common devices on the market today. Phone Manufacturers also offer their own official cover, which not only protect devices but also make them compatible with the Qi wireless charging technology.
